

# VECTOR SURVEILLANCE IN NEW JERSEY

EEE, WNV, SLE, LAC, DENV and CHIK

Prepared by Lisa M. Reed, Scott Crans and Mark Robson

Center for Vector Biology, Rutgers University

CDC WEEK 28: 12 July to 18 July, 2015

Data Downloaded 12:34 pm 20 July 2015

This New Jersey Agricultural Experiment Station report is supported by Rutgers University, Hatch funds, funding from the NJ State Mosquito Control Commission and with the participation of the Department of Health, Department of Agriculture and of the 21 county mosquito control agencies of New Jersey.

## *Culiseta melanura* and Eastern Equine Encephalitis

SITE/Boxes	Inland or Coastal	Historic Population Mean	Current Weekly Mean	Total Tested* (Collected)	Total Pools Tested* (Submitted)	EEE Isolation Pools	MFIR
Bass River (Burlington Co.)/5	Coastal	0.27	0.40	5 (7)	4 (5)		
Green Bank (Burlington Co.)/25	Coastal	2.67	0.28	22 (29)	4 (5)		
Corbin City (Atlantic Co.)/25	Coastal	0.70	0.56	89 (103)	5 (6)		
Dennisville (Cape May Co.)/50	Coastal	4.03	0.76	120 (158)	5 (6)		
Winslow (Camden Co.)/50	Inland	2.06	1.48	649 (723)	16 (18)		
Centerton (Salem Co.)/50	Inland	2.26	1.52	336 (412)	10 (12)		
Turkey Swamp (Monmouth Co.)/50	Inland	0.57	0.70	72 (107)	6 (7)		
Glassboro (Gloucester Co.)/50	Inland	0.81	0.20	103 (113)	6 (7)		

\*Current week (in parentheses) results pending.

**Remarks:** No detection of EEE in the samples tested to date.

**Traditional Resting Box Sites:** No EEE positive *Cs. melanura* pools were detected at the state resting box sites. To date, 1396 *Cs. melanura* from 54 pools have been tested for EEE with an additional 10 pools containing 256 *Cs. melanura* to be tested.

<b>Additional <i>Cs. melanura</i> trapped by counties</b> *traps with positives indicated in <b>BOLD</b> .				
<b>County</b>	<b>Trap types*</b>	<b>Number collected (pools)</b>	<b>Number of positive pools</b>	<b>MFIR</b>
Atlantic	CO <sub>2</sub>	56 (7)		
Burlington	CO <sub>2</sub>	852 (23)		
Cape May	GR, RB	15 (8)		
Cumberland	CO <sub>2</sub> , RB	68 (8)		
Middlesex	RB	25 (3)		
Ocean	CO <sub>2</sub> , GR, RB	30 (7)		
<b>TOTAL</b>		<b>1046 (56)</b>		

**Additional *Cs. melanura*:** Counties maintain trap sites for *Cs. melanura* in other areas. Additional pools from these sites were not positive.

<b>Species other than <i>Cs. melanura</i></b>	<b>Pools</b>	<b>Mosquitoes</b>	<b>Positives</b>	<b>MFIR</b>
<i>Aedes cantator</i>	9	15		
<i>Aedes sollicitans</i>	5	182		
<i>Anopheles bradleyi</i>	1	1		
<i>Anopheles crucians</i>	1	1		
<i>Anopheles punctipennis</i>	2	5		
<i>Anopheles quadrimaculatus</i>	2	51		
<i>Coquillettidia perturbans</i>	29	717		
<i>Culex erraticus</i>	1	1		
<i>Culex pipiens</i>	44	379		
<i>Culex restuans</i>	1	1		
<i>Culex salinarius</i>	7	268		
<i>Culex</i> sp.	3	5		
<b>State Total</b>	<b>105</b>	<b>1626</b>		

**Additional Species:** Eleven additional species were tested for EEE and no positives were detected.

**Horses and Humans:** No horses or humans have been reported with EEE.

**Horses and Vaccinations:** The fate of unvaccinated equids reinforces the necessity of maintaining a vaccination schedule for arboviruses. For vaccination schedules recommended by the American Association of Equine Practices, see: [http://www.aaep.org/vaccination\\_guidelines.htm](http://www.aaep.org/vaccination_guidelines.htm)

# Culiseta melanura Population Graphs

## Coastal

**BASS RIVER (Burlington Co.)**

**GREEN BANK (Burlington Co.)**

**CORBINCITY (Atlantic Co.)**

**DENNISVILLE (Cape May Co.)**

## Inland

**WINSLOW (Camden Co.)**

**CENTERTON (Salem Co.)**

**TURKEY SWAMP (Monmouth Co.)**

**GLASSBORO (Gloucester Co.)**

Populations of *Cs. melanura* at the traditional resting box sites continued to be near or well below historical averages. No positive pools detected to date.

= Positive pool(s) detected (red = melanura, purple = other species).

**EEE in US** (2015 cumulative cases): (Black or Red = previous + new reported cases occurring)

- equine: FL(14/1goat) NC(1) SC(1) TX(2) VA(1)
- mosquito pools: NY(2)
- sentinel: FL(38), TX(5)
- human: LA (1)

**West Nile Virus Positive Organisms in US, 2015**

West Nile in US (2015 cumulative cases): Single black values indicate no change from previous week. Black values / red values equals previous week/**New totals**.

<i>Coquillettidia perturbans</i>	30	718		
<i>Culex erraticus</i>	6	56		
<i>Culex pipiens</i>	116	3874		
<i>Culex restuans</i>	104	1122		
<i>Culex salinarius</i>	9	304		
<i>Culex</i> sp.	669	25436	12	0.472
<i>Culiseta melanura</i>	114	2448		
<i>Psorophora ciliata</i>	3	20		
<i>Psorophora columbiae</i>	2	21		
<i>Psorophora ferox</i>	4	8		
<b>Grand Total</b>	<b>1383</b>	<b>36197</b>	<b>13</b>	<b>0.359</b>

**Remarks:** To date, 1383 pools of 36,197 mosquitoes from 24 species have been tested, with 13 positive pools detected, all in mixed *Culex* pools. First positive of the season occurred in Middlesex County, in a pool of mixed *Culex*, collected on the 22<sup>nd</sup> of June. First positive pool in non-*Culex* was in an *Aedes albopictus* pool, collected in Monmouth County on 10 July. Overall state MFIR is 0.359, up from the previous week of 0.228.

**Humans, Horses and Wild Birds:** No human cases of WNV have been reported. For further information, see <http://www.state.nj.us/health/cd/westnile/techinfo.shtml>.

No horse cases have been detected.

Bird testing began in mid-April. Two positive birds have been reported, both corvids. To date, 19 birds have been tested. Species includes: American Crow (*Corvus brachyrhynchos* 0/1) Fish Crow (*Corvus ossifragus* 1/7), Blue Jay (*Cyanocitta cristata* 1/3), Hawk/Raptor (0/1) and other avian species (0/7). Counties (positives) submitting birds are Atlantic, **Burlington**, Essex, **Gloucester**, Hunterdon, Mercer, Monmouth, Morris, Ocean, Salem and Warren.

### WNV Results by County through 20 July 2015

<b>Grand Total</b>		<b>1383</b>	<b>36197</b>	<b>13</b>	<b>0.359</b>

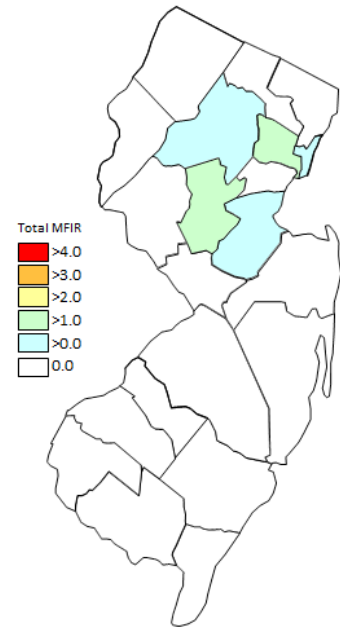

Cumulative WNV activity in 2014.

WNV activity to 20 July 2015.

WNV activity last week, 2015.

### Saint Louis Encephalitis (SLE) 2015.

New Jersey will be testing for SLE this year only when adjacent states show human activity. SLE has had previous activity in New Jersey, most notably in 1964 and 1975 (CDC's SLE [website](#)), the latter prompting the surveillance reporting by Rutgers. SLE is a flavivirus and has a similar transmission pattern to West Nile, with *Culex* species as the predominant vectors.

County	Species	Pools	Mosquitoes	Positives	MFIR
<b>Grand Total</b>					

### La Crosse Encephalitis (LAC) 2015.

New Jersey will be testing for LAC this year only when adjacent states show human activity. New Jersey has had 3 cases of this encephalitic disease since 1964 (see CDC's LAC [website](#)). The mortality is low but like other encephalitides, LAC can have both personal (lasting neurological sequelae) and economic impacts. LAC is a bunyavirus with a transmission cycle involving mosquitoes such as *Aedes triseriatus* and small mammals such as squirrels and chipmunks. LAC can not only infect *Aedes albopictus* but transovarial transmission was also demonstrated.

(Tesh and Gubler 1975 Laboratory studies of transovarial transmission of La Crosse and other arboviruses by *Aedes albopictus* and *Culex fatigans*. American Journal of Tropical Medicine and Hygiene 24(5):876-880).

County	Species	Pools	Mosquitoes	Positives	MFIR
<b>Grand Total</b>					

## Dengue (DENV) to 20 July 2015.

New Jersey will be selectively testing for DENV (including serotypes) this year. Dengue has not had a history of local transmission here in New Jersey, but each year, travelers can bring virus back from areas in the world with virus activity. This is significant as humans are NOT dead-end hosts and thus there is the potential for local transmission (i.e., New Jersey mosquitoes biting a sick person and then biting and transmitting the disease to someone else) to be established. DENV is a flavivirus but unlike WNV, *Aedes* mosquitoes are predominant vectors. In New Jersey, *Aedes albopictus* is a candidate for local transmission. There are 4 serotypes tested for Dengue. There are currently 40 imported human cases in New Jersey, no local transmission.

\*Note\* Same pools of *Ae. albopictus* are tested for the four serotypes of Dengue as well as Chikungunya.

No pools have tested positive in 2015. Currently, there are 16 imported human cases reported in New Jersey.

## Chikungunya (CHIK) to 20 July 2015.

New Jersey will be selectively testing for CHIK this year. Chikungunya is similar in symptoms to Dengue, a “breakbone” fever and has a low mortality rate. But this virus has had recent worldwide activity, and in the past year has come to the Western Hemisphere. As with Dengue, transmission can occur when a mosquito bites an infected human, then bites an uninfected human who subsequently becomes ill. CHIK is an alphavirus with *Aedes* mosquitoes as potential vectors. In New Jersey, *Aedes albopictus* is the mosquito of interest.

No pools have tested positive in 2015. Currently, there are 14 imported human cases reported in New Jersey.
