

## VECTOR SURVEILLANCE IN NEW JERSEY EEE, WNV, SLE and LAC CDC WEEK 27: July 4 to July 10, 2010

Prepared by Lisa M. Reed, Scott Crans and  
Mark Robson at the Center for Vector Biology,  
Rutgers University.  
Supported by funding from the NJ State  
Mosquito Control Commission.

### *Culiseta melanura* and Eastern Equine Encephalitis

SITE	Inland / Coastal	Historic Mean	Current Weekly Mean	Total Tested to Date*	Total Pools Submitted	EEE Isolations	MFIR
<b>Green Bank</b> (Burlington County)	Coastal	2.00	0.20	43	5	0	0
<b>Corbin City</b> (Atlantic County)	Coastal	0.70	0.44	236	7	0	0
<b>Dennisville</b> (Cape May County)	Coastal	3.63	0.02	268	8	0	0
<b>Winslow</b> (Camden County)	Inland	No history this week	0.30	1115	24	0	0
<b>Centerton</b> (Salem County)	Inland	.60	0.28	827	19	0	0
<b>Turkey Swamp</b> (Monmouth County)	Inland	0.70	0.96	122	18	0	0
<b>Glassboro</b> (Gloucester County)	Inland	0.0 <sup>†</sup>	0.47	202	6	0	0

\*Including trial run last week in May. † mean from location < 1 mile away.

**Remarks:** There are no positive EEE pools to report at this time. *Please note the increase in the number of pools and mosquitoes reported for some sites. This is due to the addition of pools not reported earlier from last month.* To date, 2764 *Culiseta melanura* mosquitoes forming 87 pools from the seven traditional resting box sites have been tested. An additional 2185 *Cs. melanura* have been tested from 1 site in Atlantic County, 3 sites in Burlington County, 15 sites in Cape May, 6 sites in Gloucester, 13 sites in Ocean and 8 sites in Sussex counties, all negative. The table below indicates non-melanura species tested for EEE:

Species other than <i>Cs. melanura</i>	Pools	Mosquitoes	Positives	MFIR
<i>Anopheles bradleyi</i>	1	1		
<i>Coquillettidia perturbans</i>	13	366		
<i>Culex erraticus</i>	3	72		
<i>Culex pipiens</i>	50	644		
<i>Culex restuans</i>	2	5		
<i>Culex salinarius</i>	4	31		
<i>Culex</i> spp.	37	818		
<i>Culiseta minnesotae</i>	1	1		
<b>State Total</b>	<b>111</b>	<b>1938</b>	<b>0</b>	<b>0.00</b>

**Horses and Vaccinations:** The fate of unvaccinated equids reinforces the necessity of maintaining a vaccination schedule for arboviruses. For vaccination schedules recommended by the American Association of Equine Practices, see: [http://www.aaep.org/vaccination\\_guidelines.htm](http://www.aaep.org/vaccination_guidelines.htm)

# Culiseta melanura Population Graphs

## Coastal

## Inland

*Cs. melanura* populations in resting boxes at the seven monitoring sites decreased at Corbin City, Centerton and Glassboro from the previous week. Slight increases or unchanged, yet still below historical values occurred at Green Bank and Dennisville. Turkey Swamp experienced higher melanura abundances than the historical mean, yet is not likely significantly higher as it is well within the error bars of the historical numbers.

Last year, the first positives came out of the Dennisville site during week 29. At that point, the site began experiencing an increase in *Cs. melanura* abundance.

↓ = Zero positive pool(s) detected.

**EEE in US (2010 cumulative cases):** (Black/Red = previous/new reported cases occurring)

- equine: 32(FL) 2(GA)
- mosquito: 3(FL)
- sentinel: 49/15(FL chickens/wild)
- human: 1(TX-out of country acquired case)

## West Nile Virus

**West Nile in US (2010 cumulative cases):** Single black values indicate no change from previous week. Black values / red values equals previous week/**New totals**.

Note: Data reported by all states should be considered provisional and subject to change. Sources for this table can be found [here](#).

<i>Culex spp.</i>	649	24719	16	0.647
<i>Culiseta melanura</i>	164	3443	1	0.290
<i>Culiseta minnesotae</i>	1	1		
<i>Orthopodomyia signifera</i>	1	1		
State Total	<b>1358</b>	<b>35961</b>	<b>24</b>	<b>0.667</b>

**Remarks:** The number of positive WNV mosquito pools to date is 24. Additional pools were found in Atlantic, Bergen, Burlington, Camden, Gloucester, Hudson and Middlesex counties. The graph below displays the cumulative positive pools found over time between 2009 (red) and 2010 (blue), indicating an increased activity over last year. It is possible that the extended dry conditions New Jersey has experienced of late have created conditions where interaction among the hosts and vectors is amplified. The addition of *Culiseta melanura* as a positive WNV pool is not surprising, given their ornithophilic nature and their role in other arboviral cycles.

**Humans, Horses and Wild Birds:** No humans or horses have been found positive for WNV to date. For more details plus information about WNV, see the West Nile Virus Alert and FAQ Sheets from the NJ Department of Health and Senior Services, Communicable Disease Service, Infectious and Zoonotic Disease Program:  
<http://www.state.nj.us/health/cd/westnile/enceph.htm>

First WNV positive bird out of 33 birds tested to date was found last week. This was an American Crow (*Corvus brachyrhynchos*) from Ocean County, collected on July 6th. This positive bird was found considerably ahead of the first positive bird from 2009 (a Blue Jay, testing positive the beginning of August, also from Ocean County). This year's tested birds include 8 *Corvus* (3 American, 5 Fish and 4 unidentified Crows), 7 Blue Jays (*Cyanocitta cristata*), 1 Hawk (unknown species) and 14 unknown species.

2010 Positive Mosquito pools to date / Total Mosquito Pools Submitted	This time last year
24/ 1068 (0.022%)	3/ 2543 (0.001%)
2010 Positive Birds to date / Total Birds Submitted	This time last year
1/ 33 (0.03%)	0/ 29 (0%)

**WNV Results by County through 12 July 2010**

Cumulative WNV activity in 2009.

WNV activity to 12 July, 2010.

WNV activity last week, 2010.

### Saint Louis Encephalitis (SLE) through 12 July 2010.

New Jersey will be selectively testing for SLE this year. SLE has had previous activity in New Jersey, most notably in 1964 and 1975 (CDC's SLE [website](#)), the latter prompting the surveillance reporting by Rutgers. SLE is a flavivirus and has a similar transmission pattern to West Nile, with *Culex* species as the predominant vectors.

No pools tested positive to date for 2010.

County	Species	Pools	Mosquitoes	Positives	MFIR
<b>Burlington</b>		<b>20</b>	<b>1464</b>		
	<i>Culex</i> spp.	8	600

<b>Salem</b>		<b>1</b>	<b>7</b>		
	<i>Culex</i> spp.	1	7		
<b>Grand Total</b>		<b>78</b>	<b>3159</b>		

## La Crosse Encephalitis (LAC) through 12 July 2010.

New Jersey will be selectively testing for La Crosse (LAC) virus this year. New Jersey has had 3 cases of this encephalitic disease since 1964 (see CDC's LAC [website](#)). The mortality is low but like other encephalitides, LAC can have both personal (lasting neurological sequelae) and economic impacts. LAC is a bunyavirus with a transmission cycle involving mosquitoes such as *Aedes triseriatus* and small mammals such as squirrels and chipmunks. LAC can not only infect *Aedes albopictus* but transovarial transmission was also demonstrated (Tesh and Gubler 1975 Laboratory studies of transovarial transmission of La Crosse and other arboviruses by *Aedes albopictus* and *Culex fatigans*. American Journal of Tropical Medicine and Hygiene 24(5):876-880).

No pools tested positive to date for 2010.
